**ABSTRACT**

For the past year, FlexSim has continued to tailor their products and services to better provide answers to decision makers. The recently released version of its flagship general simulation product, FlexSim 7.5.4, contains new material handling features that make it easy to model even the most complex conveyor and AGV systems. FlexSim Healthcare 5.0, also released in 2015, features an improved interface and enhanced visuals to cement its place as the most advanced healthcare simulation software available. And with an acclaimed textbook, new media, and expansive support, FlexSim Education is the first choice in any collegiate simulation classroom.
