ABSTRACT

Conventional simulation tools tend to force modelers to adhere to a restrictive modeling style that limits the type of problems they can solve. Wouldn't it be nice if a single generic architecture could be used as the foundation for solving problems across numerous industries? You can with ExtendSim. It's flexibility and the power of its internal database to create a single modeling architecture to represent widely different situations, has impacted a multitude of industries. Food processing plants, emergency room architects, pipeline managers, and hydrological analyzers (among others) find ExtendSim models to be more engaging and easier to experiment with. ExtendSim has made a difference by innovatively solving real problems.
