ABSTRACT

AnyLogic 9, our new innovative product, radically extends the lifecycle of simulation models. A typical model's lifetime is limited to the duration of a project, but with AnyLogic 9 technology, simulation becomes a truly operational component integrated into the company workflow: always ready to run, always editable, exposing standard open API, and not requiring any installation on the developer's or end user's machines. Digital twinning, operational decision support tools, AI training and testing – all kinds of enterprise simulation applications are naturally supported by AnyLogic 9. During our presentation, we will give a live demonstration of the creation and operational usage of AnyLogic 9 simulation models, as well as how to ensure they are constantly kept up to date.
